

Optimizing Care after Severe TBI

An interactive session.

Professor Cifu requires no introduction as a leader in the field of TBI and TBI research.

Together with Dr Robin Sekerak they bring a combined 50+ years' experience of TBI rehabilitation and research, from the neurosurgical ICU through community care, to this interactive discussion.

Slides are presented as a guideline for this discussion along with case presentations. However, we are interested in hearing your real-life cases, dilemmas, and difficulties. We will discuss the guidelines, including what they may not be able to tell us. We are happy to share our individual viewpoints, management methods, and hear yours. Through active discourse and discussion we expect that we will all come away more knowledgeable regarding the most complicated injury to the most complex system (the human brain) in the known universe.
