

Is there low hanging fruit when it comes to Robotics in Rehabilitation or what can you get for cheap that works?!

A/Prof Faux will discuss the evidence for and prescription of , on line management of rehabilitation issues such as falls, pain & stroke. Low cost apps and devices that can be used immediately to benefit physiotherapy interventions, encourage exercise and promote cognitive repair will also be presented.

Data from his experience in the use of VR for stroke and the SMARTGLASSES project will be presented together with information on the role of Australia's first human-robot interaction research laboratory in assessing the use of technology by patients and staff in rehabilitation.
