

## **Neuropathic Bladder and Bowel**

Current concepts of the physiology of bladder and bowel will be reviewed with specific reference to the effects of neurological impairment. The pattern of dysfunctions seen in those with Parkinson's disease, MS and stroke, will be illustrated by the effects of a spinal cord injury.

Current management of these bowel and bladder dysfunctions will be outlined.

The workshop will be interactive and those attending will be invited to discuss specific cases, illustrating the pathophysiology, and the challenges.
